Your smart maintenance

The **Contact@ir®** transmitter combined with the **Rout@ir®** receiver is a sedentary solution for real-time diagnosis, history and alert.

## Contact@ir® + Rout@ir®

- The Contact@ir® transmitter is connected and securely attached to the Contact@ir® Ready product to be monitored (Paraton@ir®, Compt@ir®, Alert@ir XT®, Alert@ir DC®...)
- The Rout@ir® receiver is connected to an electrical outlet and is placed inside a building while its antenna (supplied) is placed outside.
- The system enables the reception and recording of real-time alerts and regular verifications on the operation of nearby Contact@ir® Ready products.
- No physical link between the Contact@ir® transmitter and the Rout@ir® receiver (Use of short-range radio wave - 300 meters maximum).
- Consultation of recordings by the Rout@ir application (Android)
- If the Rout@ir is connected to the internet, alerts and diagnostics are received in real time in the LPS Manager application from anywhere.
- A customer account is required (contact us)

## Operating

The Contact@ir® transmitter is connected and securely attached to the Contact@ir® Ready product during product installation. No configuration required, "plug and play" product. (Example here on a Paraton@ir® ESE).

The Contact@ir® transmitter continuously communicates the operating status of the Paraton@ir®. The Rout@ir® receiver records the data. The information is available on-site with the Rout@ir® app for Android. They are sent to the LPS France cloud if the Rout@ir® is connected to the internet. The LPS Manager application allows remote consultation of this information.

Contact@ir®  
+  
Rout@ir®

## Real time alerts

When the Paraton@ir® is struck by lightning, the Contact@ir® immediately issues the alert. The Rout@ir® receives the alert and immediately sends the information to the LPS France cloud (internet connection is compulsory, otherwise it saves it for a later connection).

The LPS Manager app displays the alert in real time.

Verification of the lightning protection installation is necessary. Use LPS Manager to perform audits and get detailed monitoring of your installations.

## Contact@ir®

Reference	Function	Dimensions in mm	Weight in kg
50001	Radio emitter	50x24x27	0,037

- Communicates the operating status and alerts of the product Contact@ir® Ready to which it is connected.
- Self-test diagnosis every 100 seconds 24/7
- Real-time: Impact alert with lightning current measurement + Alert default + transmitter disconnect alert
- Diffuse light photovoltaic module that does not require solar orientation and can also work with artificial light (Indoor)
- Low energy and short range radio emission (frequency used: 868 Mhz; other frequency on request)
- Emission every 100 seconds 24/7 (or real time if alert)

## Rout@ir®

Reference	Function	Max reception distance in m	Dimensions in mm	Weight in kg
50003	Récepteur radio	300 (*)	300x220x35	0,310

- Receipt of data from the Contact@ir® transmitter(s) within scope
- Contact@ir® Ready product diagnostic and monitoring Tool with data recording and history.
- Reading of the data received with a smartphone or tablet close by with Bluetooth connection in the Rout@ir app (Android)
- Reading of data and receiving of real-time alerts in the application LPS Manager (remote) if the Rout@ir® is connected to the internet (possible in Wifi, Ethernet, mobile data). *API disponible, nous consulter.*
- Compliance with NFC 17-102:2011 and IEC 62305 standards and equivalent country standards

(\*) Maximum distance between Contact@ir® transmitter and Rout@ir receiver®

Dongl@ir®

Ensure the constant vigilance of all lightning protection installations:

- Maintain security of property and people 24/7
- Easily perform installation audits
- Meet standard maintenance requirements
- Preserve warranties (manufacturer, distributor, installer...)
- Manage installations remotely from the LPS Manager application

## Remote testing and Ongoing monitoring:

Paraton@ir®

Compt@ir®

Alert@ir® XT

Alert@ir® DC

### Contact@ir® system communicates:

- **Regularly and continuously**, the operating status (self-diagnosis) of the Contact@ir® Ready products:

- Paraton@ir®
- Compt@ir®
- Alert@ir® XT
- Alert@ir® DC

- **In real time**, the alerts:

- lightning strikes
- current measurement
- product defect

With Dongl@ir real-time and historical alerts are not available.
